

User Guide for the EnzymeCorrelator

First time setup

From Windows

Download and install [Anaconda](#) (default settings) and [GitHub Desktop](#) (skip Sign in to GitHub and enter your name and e-mail).

In GitHub Desktop, choose Clone a repository from the internet..., then URL and enter:

```
https://github.com/JPBureik/enzyme\_correlator.git
```

and enter the directory into which to save the program

(e.g. C:\Users\username\Documents\GitHub\enzyme_correlator), then clone.

Update program after it has been changed

From Windows

Open GitHub Desktop and choose Fetch origin.

the Start Menu: Git > open Git Bash and navigate to the directory into which you have cloned the program during the first time setup (e.g. C:\Users\username\Documents\prog\enzyme_correlator):

```
$ cd c/Users/username/Documents/prog/enzyme_correlator
```

Pull the updates from GitHub:

```
$ git pull github master
```

Launch program

From Windows

From the Start Menu: Anaconda3 > open Anaconda Powershell Prompt (recall with the up arrow key):

```
$ python C:\Users\username\Documents\prog\enzyme_correlator\enzyme_correlations.py
```
